1. Download git form

https://git-scm.com/download/mac

2 .try command > which git

It tell you where git is installed

3. Try git --version

It tell you version of the git

4. Create local git repository

Go to your project ex > cd socialMedia/

Then enter

1. Initialize the local directory as a Git repository.

> git init

Then enter > ls -a

That will show .git file in the folder

2. Add the files in your new local repository. This stages them for the first commit.

> git add .

3.Commit the files that you've staged in your local repository.

> git commit -m "First commit"

4. Check status using

> git status

5. Show all commits

> git log

6. In Terminal, add the URL for the remote repository where your local repository will be pushed.

> git remote add origin URL

7. Now push

> git push -u origin master

Then enter user name and password

And this will upload all the file to GitHub

After that when you change the code and want to upload to the git then

1. Check status that will show you all your files name in which content is changed

> git status

2. Add the files

> git add .

Or

> git add file name (if you want to upload single file)

3.Commit the files that you've staged in your local repository.

> git commit -m "secound commit"

4. Now push

> git push -u origin master
